Final artefact delivery inventory
25 October 2026. Prepared delivery list; tutor/client acceptance is not asserted.

1. GEO Experiment and Optimisation Software
Selected historical implementation, individual method snapshots, generation/evaluation code and portable verification scripts. Delivery: 03_code in the private ZIP and public GitHub. Research prototype, not deployed software.

2. Optimised Travel Page Demonstrator
52 saved outputs, corresponding baseline evidence, fingerprints and page comparisons. Delivery: 04_evidence in the private ZIP. Historical offers; not current booking content.

3. Experimental Results and Reproducibility Pack
Queries, frozen page database, original answers, source maps, individual/combined results, position diagnostic and secondary checks. Delivery: private 04_evidence and offline scripts. GitHub publishes aggregate summaries only. Original records are unchanged.

4. Technical Report and Handover Guide
Revised PDF, claim ledger, assessment context, current validation record and reproduction instructions. Current report and companion documentation are also public. Human citation-support review and relevance calibration remain unresolved.

5. Final Presentations and Notes
Both clearly labelled decks: FC leadership briefing and professor assessment presentation with saved-evidence demo. Embedded/matching notes and earlier professor preparation PDFs are included. Earlier preparation material is historical; use the delivered deck for current numbering. Both current decks match GitHub byte-for-byte.

Opening instructions
Extract GEO_Final_Handover.zip completely and open START_HERE.html. Keep all folders together. Public GitHub intentionally excludes full third-party captures and answer archives; its aggregate check is not the private raw-record audit.

Result boundary
116/290 baseline versus 152/290 selected repeat (40.0% versus 52.4%); initial unchanged-page run 143/290. Individual controls use 114/290. These are exploratory citation-inclusion results. No promise of recommendation, live-platform uplift or sales. FC can implement recommendations without reproducing our sandbox.
