Proposed artefacts for handover

Flight Centre Travel Group | GEO research project

For tutor review and inclusion in the artefact agreement. Proposed scope and delivery conditions are listed below; this document is not an approval or signed agreement.

Overall delivery

A documented research prototype with saved experimental evidence and reproduction tools. This is not a deployed production system and does not establish increased booking recommendations or sales.

1. GEO Experiment and Optimisation Software

Contents: Selected page-processing and evaluation code, relevant individual-method snapshots and verification scripts.

Delivery: Public GitHub repository; matching historical code in 03_code of the assessment package.

Condition: Research prototype. Live API generation and full historical search rebuilding require additional inputs/provider access; no production deployment is included.

2. Optimised Travel Page Demonstrator

Contents: 52 saved optimised page outputs, selected baseline comparisons and manifests identifying the page versions.

Delivery: 04_evidence/pages and page comparison views in the assessment ZIP.

Condition: Offline captured-page demonstrator. Historical fares and capture differences remain disclosed; not current customer booking content.

3. Experimental Results and Reproducibility Pack

Contents: Saved generated answers, source maps, numerical results, individual and combined comparisons, limitations and offline checking tools.

Delivery: 04_evidence, verification reports and scripts in the assessment ZIP; aggregate numerical summaries on GitHub.

Condition: Recorded results can be inspected and recounted. Repeated live AI generation is not guaranteed to return identical answers. Independent claim-support review remains outstanding.

Artefacts and delivery details

4. Technical Report and Handover Guide

Contents: Architecture, method explanations, claim-evidence ledger, assessment mapping, reproduction instructions and review checklist.

Delivery: 02_documentation and START_HERE.html in the assessment ZIP; concise companion documentation on GitHub.

Condition: Documentation of the delivered scope and known limitations. Does not assert client/tutor acceptance or unverified personal contributions.

5. Final Presentation and Presenter Notes

Contents: One editable PowerPoint, embedded diagrams and examples, backup evidence slides and six speaking guides.

Delivery: 01_presentation in the assessment ZIP; identical PowerPoint and scripts in the public GitHub repository.

Condition: 18 main slides planned for 20 minutes plus 8 backup slides; 5 minutes for questions. Team names, truthful contributions and final rehearsal must be completed by the team.

Delivery channels

Public GitHub: https://github.com/muhammadmubbashar/GEO--Generative-Engine-Optimisation

Separate handover: GEO_Semester_2_Assessment_Package.zip, containing the full captured evidence and offline inspection tools. Share this package through the agreed assessor/client channel.

Details to confirm before finalising the agreement

Recipient: to be confirmed. Delivery date: to be confirmed. Delivery channel: to be confirmed. Acceptance process: to be confirmed with the tutor and Flight Centre.

Scope boundaries

The deliverables preserve historical results and code. Live API use requires provider access and appropriate inputs. Independent citation-support review remains outstanding. No client approval, production readiness, or unverified personal contribution is implied.
